

# Simplify Logistics Processes

Using SAP Logistics Business Networks (LBN)

The entire logistics operations – from sales order management to contracting, execution, and settlement – must be streamlined and simplified to ensure that products are delivered in the best condition, in the quickest time, and at the cheapest rate possible. Logistics organizations must be able to effectively orchestrate and harmonize logistics resources, processes, and partners to minimize risks, improve visibility and traceability, and minimize costs.

## Why SAP LBN

SAP Logistics Business Networks (LBN) allows logistics organizations to digitally collaborate on an open network to accelerate and simplify logistics processes. SAP LBN leverages advanced technologies such as the Cloud and Blockchain to optimize traceability and freight collaboration. It allows network owners, participants, and data contributors to use data from various sources and turn them into intelligent insights visualized into stories to understand and effectively manage events.

## Key Features

### Freight Collaboration

Digitally govern the end-to-end freight order lifecycle and effectively manage appointments. Seamlessly collaborate with third-party logistics providers using “contractless” transactions and real-time connectivity and visibility.

### Material Traceability

Digitally connect supply chains to improve efficiency, transparency, and traceability. Get a detailed product genealogy to easily trace material provenance and obtain end-to-end multi-ingredient traceability. Streamline recalls through cross-company alerting for product issues.

### Global Track & Trace

Obtain real-time transparency and query-tracked processes. Graphically visualizes details of ERP processes, milestones, and related locations for easy tracing and tracking of assets and events. Automatically report planned and unplanned events to proactively mitigate risks and prevent costly delays.

### Intelligent Insights

Get real-time insights into a supply chain execution and graphic visualization of supply chain events. Easily turn data and insights into meaningful stories to make informed decisions.

## Key Benefits

Improve trust and collaboration.

Get real-time transparency.

Easily obtain intelligent insights into internal and external events.

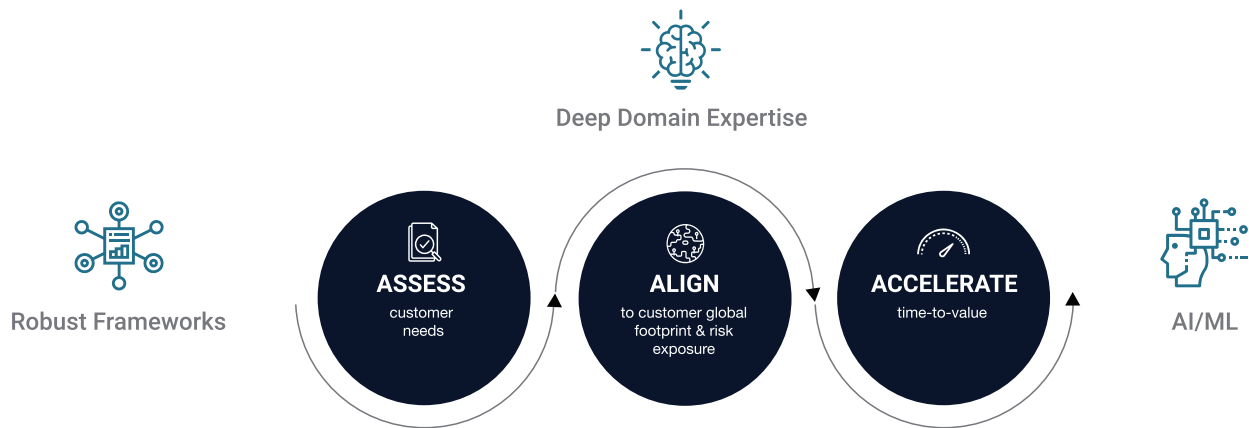

Minimize logistics costs.

## Why Ropaar

The success of your SAP LBN project depends on who your implementation partner is. We at Ropaar do not provide our clients with canned and cookie-cutter solutions. We study your business thoroughly so we can provide you with the right solutions to your unique problems and issues. We offer relational – rather than transactional – customer engagement.
